PROFESSIONAL SUMMARY

Recent B.E Information Technology (Honours in AI & ML) graduate with hands-on experience in backend development, Android applications, and Natural Language Processing (NLP). Skilled in Python, Java, Spring Boot, JS, AI/ML and MySQL, with a strong foundation in software development and problem-solving. Proven ability to work in team environments and deliver real-world solutions through internships and academic projects.

SKILLS

Programming & Frameworks:	Python, C/C++, MySQL, HTML/CSS, JavaScript (React), Flask, FastAPI, REST APIs
Data & Machine Learning:	Data Analysis, Pandas, NumPy Machine Learning, Deep Learning, Computer Vision, NLP, scikit-learn, PyTorch, TensorFlow, OpenCV
Cloud, Deployment & Monitoring:	Azure, Docker, Grafana
Databases:	MySQL, Postgres, MongoDB
Automation & DevOps:	Git, CI/CD, DevOps
Professional Skills:	Leadership, Problem Solving, Analytical Thinking, Cross-team Collaboration, Ownership

EXPERIENCE

NLP Project Trainee - Demos Foundation for Research in Humanities July 2025 – June 2026
Hybrid

- Developed an intelligent news article analysis system using NLP techniques
- Implemented Named Entity Recognition (NER) for extracting entities like people, organizations, and locations
- Built a relationship extraction pipeline to identify connections between entities
- Designed a modular pipeline integrating NER, normalization, and summarization
- Worked on improving accuracy through rule-based and model-based hybrid approaches

Android Application Development Intern - Remote Data Exchange February 2025 – May 2025
Hybrid

- Developed an Android application for real-time employee tracking
- Implemented secure login using WhatsApp OTP and face recognition
- Enhanced user authentication and tracking reliability

Java WAD Intern - Krios Info Solutions Pvt.Ltd. December 2024 - January 2025
On-Site

- Worked in a 4-member team to develop M-Krishi, a web application for an Assam-based NGO
- Led backend development using Java and Spring Boot
- Integrated REST APIs with frontend components

EDUCATION

B.E. in Information Technology with Honours in AI & ML SPPU — CGPA - 8.22
Trinity Academy of Engineering, Pune

Class XII (HSC) Maharashtra Board — First Class
MTES Jr. College, Pune

Class X (CBSE) CBSE — 96.2%
RMD Sinhgad Spring Dale School, Warje

CERTIFICATIONS/AWARDS

- **Research Paper Conference Participation, IMCRETE - April 2026**
- **Career Essentials in GitHub Professional Certificate - July 2026** - [Link](#)
- **Microsoft Azure Essentials Professional Certificate by Microsoft and LinkedIn - July 2026** - [Link](#)
- **Azure AI Essentials Professional Certificate by Microsoft and LinkedIn - July 2026** - [Link](#)
- **DevOps Professional Certificate by PagerDuty and LinkedIn - Aug 2026** - [Link](#)

PROJECTS

Library Management System

- Built using Java, Spring Boot, and MySQL
- Implemented CRUD operations and database integration
- Designed backend architecture for efficient data handling

Gesture-Based Emergency Assistance System

- Developed a real-time emergency assistance system using hand gesture recognition for patient support
- Built backend services using Spring Boot, designing REST APIs and database schema for alerts, devices, and patient management
- Integrated Firebase Cloud Messaging (FCM) to deliver instant notifications to medical assistants
- Implemented real-time alert handling workflows to ensure quick response in emergency scenarios

Intelligent News Article Analysis and Entity Relationship Extraction System ([GitHub](#))

- Developed an AI-powered news analysis system using Python, FastAPI, React, and PostgreSQL
- Implemented NLP pipeline for metadata extraction, named entity recognition, taxonomy classification, summarization, and entity normalization
- Built an entity relationship extraction module with interactive knowledge graph visualization for analyzing relationships in news articles
- Integrated transformer-based NLP models, spaCy, Celery, RabbitMQ, and Gemini API to enable scalable and automated news processing

Soulcaster Community Operations Platform

Ongoing

- Contributed to a full-stack community operations platform comprising a Next.js web application and a production Discord bot.
- Built web features using Next.js, React, TypeScript, PostgreSQL, Prisma, and Tailwind CSS, including role-based member tools, analytics dashboards, documentation, and real-time WebSocket communication.
- Developed Discord automation using Node.js, TypeScript, Discord.js, Redis, BullMQ, and PostgreSQL for member workflows, reminders, finance requests, moderation, and operational alerts.
- Supported reliable deployment and maintenance through automated CI/CD review environments, scheduled jobs, structured logging, and Prometheus metrics.
